#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cornelison et al. (U.S. 2,958,021) in view of Tajima (U.S. 5,632,158).

Cornelison discloses a cooling arrangement for electrical devices comprising:

- a pipe member having two opposing open ends;
- a lid closely covered on one open end;
- a base having an interlocking member with a flange fitly embracing the pipe member to receive the other open end of the pipe member therein, wherein a thickness of the flange is not larger than a thickness of pipe member at the open end received in the interlocking member;
- the pipe member is a cylindrical pipe, the lid includes a filling tube mounted thereon for working fluid to be filled in the pipe member;
- the pipe member is sealed with a sealing structure on the filling tube;
- the base includes a flat surface opposite to the inside surface for contact with a heat source; and

Art Unit: 3743

- an annular slot is extended outwardly to the whole base.

Cornelison's invention discloses all of the claimed limitations from above except for a wick structure attached on an inner wall of the pipe member and an inside surface of the base.

However, Tajima teaches a wick structure attached on an inner wall of the pipe member and an inside surface of the base.

Given the teachings of Tajima, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the cooling arrangement of Cornelison with a wick structure attached on an inner wall of the pipe member and an inside surface of the base.

Doing so would provide enhance thermal conduction and dissipation of the cooling arrangement.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following references cited on the USPTO 892 discloses related limitations of the applicant's claimed and disclosed invention.
